SUMMARY

Third-year Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning at Chitkara University (CGPA: 8.66/10). Experienced in building and deploying full-stack web applications using Django and Flask, and developing machine learning pipelines for real-world financial and healthcare domains. Proficient in Python, SQL, and REST API design, with 3 live-deployed projects and 7 industry certifications from Microsoft and Cisco.

EDUCATION

Chitkara University

B.E. Computer Science Engineering – Artificial Intelligence & Machine Learning
• CGPA: 8.66/10

Rajpura, Punjab
Expected May 2028

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL, JavaScript, HTML, CSS
Frameworks & Libraries: Django, Flask, FastAPI, REST APIs
ML & Data Science: NumPy, Pandas, Scikit-learn, XGBoost, LightGBM, TensorFlow
Data Visualization: Matplotlib, Seaborn, Plotly
Databases: PostgreSQL, MySQL, SQLite, MongoDB
Tools & Platforms: Git, GitHub, Render, Postman, VS Code
Core Concepts: Data Structures & Algorithms, DBMS, Object-Oriented Programming, Operating Systems

PROJECTS

- MovieFlix – Full-Stack Movie Booking Platform** | *Django, Flask, Python, MySQL, Razorpay API* [GitHub](#) | [Live Demo](#)
- Architected and deployed an end-to-end movie ticket booking platform with dynamic seat selection, real-time show scheduling, and full booking history across 5 normalized MySQL database models (movies, theaters, shows, bookings, users).
 - Integrated Razorpay payment gateway with webhook-based verification, enabling secure end-to-end transaction processing and eliminating fraud risk across all checkout flows.
 - Designed a hybrid backend combining Django ORM for relational data management with Flask microservices for lightweight API endpoints, achieving clean separation of concerns and improved horizontal scalability.
 - Implemented role-based authentication (admin and user roles), movie ratings, reviews, and profile management, resulting in a complete multi-user platform deployed live on Render.
- MediColl – AI Medical Assistance Platform** | *Django, Python, MySQL, Ollama, Leaflet.js, OSRM API* [GitHub](#) | [Live Demo](#)
- Built and deployed a full-stack AI healthcare platform where patients describe symptoms and receive medical guidance via a locally running LLaMA 3 model (Ollama), keeping all patient data fully on-device for privacy compliance.
 - Engineered a real-time nearest-hospital detection system using Leaflet.js for interactive mapping and the OSRM API for route optimization, delivering turn-by-turn emergency navigation to the closest healthcare facility.
 - Developed an AI-powered medicine recommendation engine that cross-references patient symptoms with stored medical history, backed by secure JWT authentication and persistent health record management across 4+ database models.
- Bank Trend Predictor – ML Financial Signal System** | *Python, Pandas, NumPy, Scikit-learn, XGBoost, yfinance* [GitHub](#)
- Developed a production-grade ML pipeline predicting 5-day directional price trends for 10 major Indian banking stocks (NSE), enriched with macroeconomic signals from Bank Nifty, Nifty 50, USD/INR, and India VIX.
 - Engineered 30+ technical features spanning trend, momentum, volatility, and volume categories – including RSI-14, MACD histogram, Bollinger Bands, ATR%, and Stochastic %K/%D – with SMA-smoothed labels to reduce target noise.
 - Benchmarked 4 classifiers (Logistic Regression, Random Forest, XGBoost, LightGBM) under walk-forward time-series cross-validation with zero data leakage, achieving 70–73% directional accuracy; backtested on a simulated INR 1,00,000 paper-trading portfolio.

EXPERIENCE

BroCode – Cultural & Events Club

Management Team Member

- Contribute to the planning and logistics of cultural and technical events organized by the club at Chitkara University.
- Coordinate with fellow team members on volunteer management, event setup, and on-ground operations to ensure smooth execution.

Chitkara University
June 2026 – Present
